EDUCATION

University of Massachusetts Lowell, Lowell, Massachusetts

Bachelor of Science in Computer Science

GPA: 3.5

Expected: Dec 2027

Bunker Hill Community College, Charlestown, Massachusetts

Associates of Science in Data Analytics

GPA: 3.9

Sep 2023 – Dec 2024

TECHNICAL SKILLS

Languages: Python, C, C++, SQL

Libraries: pandas, NumPy, scikit-learn, Matplotlib, nltk

Frameworks: Django

Tools: Linux, Git, Docker, Tableau, Excel, Microsoft Suite, Bcftools, MySQL, Cloud SQL, Terminal/CLI

EXPERIENCE

Data Science Intern

May 2026 – Aug 2026

Tevard Biosciences

Boston, MA

- Built an interactive web platform that visualizes gene-level protein domain and variant data from ClinVar, enabling faster interpretation of clinically relevant mutations
- Developed a pipeline to parse and classify variants (missense, nonsense, synonymous) from HGVS notation, improving data accuracy for downstream analysis
- Engineered interactive visualizations (KDE density plots, domain diagrams) to surface pathogenicity patterns across protein regions
- Collaborated with the development team to scope features and incorporate feedback into iterative releases

Data Science Intern

Sep 2025 – May 2026

University of Massachusetts Lowell

Lowell, MA

- Genomic data took hours to process manually, wrote Python scripts to automate cleanup and cut time significantly
- Built models to predict patient outcomes from messy health records
- Raw sequencing files too large to handle by hand, designed pipelines that process 200GB+ automatically
- Present findings at UML Research Symposium, learned to explain technical work to broader audiences

Quality Assurance Intern

Sep 2025 – Dec 2025

TwinRayJ Studios

Dekalb, IL

- Bugs slipped through before release, tested iOS and Android builds and caught 30+ issues before players saw them
- Manual testing was slow, automated 5 test cases using Robot Framework to speed things up
- Wrote clear bug reports with reproduction steps so developers could fix problems faster
- Cut post release bugs by 30%, reduced testing time by 25%, suggested 8 design changes with 3 shipped

Math Tutor

Jan 2023 – Dec 2024

Bunker Hill Community College

Charlestown, MA

- Students struggled with calculus and statistics concepts, broke down problems into simple steps they could follow
- Met with students one on one to identify gaps in understanding and adjust explanations to fit their learning style
- Helped students improve exam scores and build confidence in math
- Learned to communicate complex ideas clearly and adapt quickly when one approach was not working

PROJECTS

File Organizer | C++, MySQL, Terminal CLI

Dec 2026

- Files scattered across folders, built C++ tool that scans and sorts 1,000+ files automatically
- Connected to MySQL database to track file origins and movements
- Reduced manual organization time by 50%, learned how databases interact with file systems
- Planning to add undo feature so users can restore files if needed
